

Amos AKOGBE

Cyber Threat Intelligence Analyst

amosakogbe@gmail.com | (+229) 0194409664 | <https://www.linkedin.com/in/amos-akogbe> | <https://w4lk3r04.github.io/>

SUMMARY

Security Analyst and CTF player with hands-on experience in **penetration testing, incident response, and SOC investigations**. Conducted vulnerability assessments, investigated security incidents using KQL and MITRE ATT&CK, and contributed to security compliance and awareness initiatives across internship and training environments. Passionate about threat detection, AI security research, and building resilient systems through practical security engineering, continuous learning through CTF and practical training. Motivated by solving high scale problems and solving new challenges.

SKILLS

- **Programming & Scripting:** Python, Bash & PowerShell, KQL, JavaScript, C/C++
- **Offensive Security & AppSec:** Network/Web Penetration Testing (Nmap, Metasploit, Burp Suite), Automated Vulnerability Scanning (OpenVAS), API Testing & Security (Postman), Exploit Replication & Scripting
- **Infrastructure & Cloud Engineering:** Linux Systems (Ubuntu, Kali, Parrot OS), CI/CD & Orchestration (Docker, Kubernetes), Cloud Security & Architecture (GCP), Virtualization, Network Administration
- **Frameworks and Security standards:** NIST, SOC 2, ISO 27001, PCI DSS
- **AI Engineering:** Prompt engineering, Claude for AI agent development, AI automation (Claude Code)
- **Soft Skills:** Problem-solving, Curiosity, Dedication and Experience working on a collaborative team, Bilingual: French (Fluent); English (C1).

EMPLOYMENT HISTORY

Feb 2025 – Jun 2025

Pentester Intern (*Bodah Logistics, Abomey-Calavi, Benin*)

- Resolved +5 vulnerabilities from security testing on internal API and the official website reinforcing the security posture.
- Led and coordinated incident response activities using the NIST Incident Response Lifecycle, restoring operations within 72 hours without data loss.
- Delivered phishing awareness and password security training to 50+ employees, reducing risky user behavior by 40%.

Jan 2025 – Apr 2025

System Incident Investigator (*Blacks in Cybersecurity, Baltimore, USA*)

- Investigated and resolved 12+ security incidents leveraging KQL and MITRE ATT&CK methodologies to analyze attacker activity and identify affected assets.
- Reconstructed multi-stage intrusions across endpoint, and authentication telemetry, mapping the full attack lifecycle from initial compromise to data exfiltration.
- Performed malware and file analysis to determine indicators of compromise (IOCs), scope affected systems, and support remediation efforts.
- Developed incident response procedures and detection recommendations that improved investigation consistency and accelerated threat containment.

Mar 2024 – Aug 2024

Information Security Analyst (*EMES Sarl, Cotonou, Benin*)

- Performed penetration testing on client applications and identified security weaknesses enhancing application integrity.
- Conducted API and functionality testing using Postman to improve application reliability and reduce deployment issues.
- Developed secure backend microservices using JavaScript and Bash.

EDUCATIONAL BACKGROUND

Aug 2025 – Dec 2026

Master of Science in Information Technology

Carnegie Mellon University

Concentration: Cybersecurity, Cyber Threat Intelligence and AI

Sep 2021 – Nov 2024

Bachelor of Information Technology Security

University of Abomey-Calavi

Concentration: Information Technology, Cybersecurity and Programming

PROJECTS

July 2026 – Present

CTI Feed Collector Aegis Intel | Python, AI, Threat modeling

- Build a Threat Intelligence workflow with a fully automated data and intelligence collector with multi-source feed collection.
- Used qwen2.5:1.5b for AI-automated analysis (Automated relevance scoring, classification, etc)
- Configured alerts automation via Email and Slack for high and critical threats or vulnerabilities.

Mar 2026 – May 2026

Security Green Agent | Python, Agentic AI, A2A protocol, Threat modeling

- Customizing an AI agent model using a curated library of 400+ specifications, testing vulnerabilities to identify flaws in other AI agents and Python.
- Developing a reasoning-based agent using LLMs to autonomously probe for logic flaws and reproduce vulnerabilities using the A2A protocol.

Apr 2025 – Aug 2025

Virtual Security Lab for Attack analysis | Python, Bash, Docker, MITRE ATT&CK

- Built a Security Lab to implement vulnerable scenarios using Kathará with full infrastructure and replicable code to boost responses against common types of cyberattacks.
- Analyzed the techniques and tactics used by the potential attackers using MITRE ATT&CK and the Cyber Kill Chain.
- Completed a full security assessment report with recommendations for proactive monitoring and enforced security.

INTERESTS & ACHIEVEMENTS

- 2nd place in the Berkeley AgentBeats Security Arena with the team X-Detector building a purple AI agent to test and defend AI prompt injection attacks through input manipulation for data leakage.
- CTF Player and researcher in Threat hunting, Cybersecurity automation with ML and a Medium blogger (<https://medium.com/@amosakogbe>)
- Google IT Support Professional, Google Cybersecurity and Google Cloud Cybersecurity
- Certified Network Security Practitioner
- Junior Web Penetration Tester certificate
- 45th place at PicoCTF 2024 in Africa
- Blacks in Cybersecurity Blue Team Program graduate, completing 12 real-world security investigations with reports.
